BANDAM SRIDHAR

Backend Developer | Python | FastAPI | Docker | AWS
sridharbandam40@gmail.com | +91 9701440317 | Hyderabad, Telangana
Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Backend Developer who designed and deployed a production-style RBAC authentication system (10+ REST APIs, JWT/OTP, RBAC) on AWS EC2 with Nginx, Gunicorn, and systemd. Currently building a second production-grade backend — a real-time video calling platform with a full CI/CD pipeline (Docker, GitHub Actions) and automated testing. Comfortable owning a system end-to-end: API design, security, containerization, deployment, and infrastructure automation.

TECHNICAL SKILLS

Languages: Python, SQL, Bash (basic)
Frameworks: FastAPI, Streamlit, SQLAlchemy, Pydantic
Auth & Security: JWT, OTP Verification, RBAC, REST API Design
Databases: MySQL, PostgreSQL, SQLite
DevOps & Cloud: Docker, GitHub Actions (CI/CD), AWS EC2, Nginx (Reverse Proxy), Gunicorn, systemd, Linux, Let's Encrypt
Tools: Git, GitHub, Postman, VS Code

PROJECTS

RBAC Authentication System with OTP & JWT

Tech: Python, FastAPI, SQLAlchemy, MySQL, JWT, Streamlit, AWS EC2, Nginx, Gunicorn, Linux, systemd, HTTPS

- Designed and built 10+ REST APIs for user registration, login, and protected endpoints using FastAPI with email OTP verification and JWT-based session management.
- Implemented role-based access control (Admin / User) with middleware-level permission enforcement, restricting unauthorized access to sensitive routes.
- Structured MySQL with a 3-table relational schema (users, roles, permissions); deployed on AWS EC2 (Ubuntu) using Nginx as reverse proxy and Gunicorn with systemd for auto-restart on failure.
- Configured a custom domain with HTTPS using Let's Encrypt, enabling secure public access to the application and FastAPI Swagger documentation.
- Built a Streamlit frontend for login, registration, and role-based dashboards; managed .env configuration to secure production credentials.

Stranger Video Call — Real-Time Video Calling Platform (In Progress)

Tech: Python, FastAPI, PostgreSQL, Docker, GitHub Actions, AWS EC2, Flutter (planned)

- Building a production-grade backend for a real-time random video calling app, architected for CI/CD from day one rather than bolted on later.
- Set up a full CI/CD pipeline using GitHub Actions with automated test runs on every push, using a dedicated Dockerized test environment isolated from development.
- Planning a Flutter cross-platform frontend and Play Store release under a dedicated domain (strangervideocall.in); researching platform safety/moderation requirements for random video-chat apps ahead of submission.

  GitHub: github.com/Sridhar990/stranger-video-call-app

PROBLEM SOLVING PRACTICE

Regular practice in Python: Arrays, Strings, Two Pointers, Sliding Window, Prefix Sum, Frequency Counting, Sorting.

EDUCATION

B.Tech — Computer Science & Engineering (Cyber Security) **2021 – 2025**
Sri Indu Institute of Engineering and Technology, Hyderabad | CGPA: 6.54 / 10
Relevant coursework: Network Security, Operating Systems, DBMS, Cyber Security Fundamentals

CERTIFICATIONS & TRAINING

Data Science — Teks Academy Institute, Hyderabad (Virtual) | Python for Data Science, EDA, ML, Model Deployment | Apr 2025 – Jul 2025
